Municipal Setting Designation
Application Instructions

Pre-Application Meeting: While a pre-application meeting is not mandatory, it is strongly encouraged to discuss the specific details of the site. Please note: the City of Houston will not support a Municipal Settings Designation (MSD) application unless a Professional Geologist (P.G.) or Professional Engineer (P.E.) has certified that the groundwater plume is stable or decreasing, fully delineated, and the source has been removed. This statement should be supported with historical groundwater monitoring data showing the plume as stable or declining, and fully delineated.

Please contact Mark A. Wooten Jr. at (832) 394-9003, mark.wooten@houstontx.gov to schedule a pre-application meeting. Meetings will be held at 1002 Washington, Houston, TX 77002

Application Form: For the application to be complete please submit the following:

1) Two (2) hard copies of the application (the well logs are not necessary for the hard copies but should be included in the electronic copy). Please separate the application appendices with divider sheets that are tabbed.
2) An electronic portable digital file (pdf) of the application including all supporting material
3) An electronic Excel file with mailing addresses for water well owners and property owners. (Templates can be found on the MSD website, www.houstonmsd.org)

The MSD application process is governed by Chapter 47, Article XIII of the City of Houston's Code of Ordinances (ordinance number 2007-959, and amended by ordinance number 2010-556). Failure to use this application form may result in denial of the application.

Please note, the City ordinance requires the Professional Engineer (P.E.) or Professional Geologist (P.G.) who signed the application, or someone that is familiar with the application, and the applicant or their legal representative (attorney) to be present at public meeting and public hearing. Failure of the required parties in attendance at the public meeting and public hearing will result in having to schedule a new meeting or hearing.

The application should be clear, complete, concise, correct, contain only relevant information and be organized to facilitate analysis. Supporting documentation should be submitted as a separate appendix to the application, as noted (Label "Appendix__ ") for each numbered item.

Submittal: Submit the application form and all supporting information, along with an application fee of $3,400.00 (payable to City of Houston) to the address below. The applicant must also pay the cost of producing and mailing notices, (approximately $6.50 per certified mail and $1.50 per first-class mail), and any applicable venue costs (costs vary by location). Mailings are done through the U.S. Post Office's Click2Mail system. At the time of the mail outs, staff will require a credit card number to pay for processing and mailing the notices.

ITEM	COH Use
Executive Summary	
1. Provide a legal description of the boundaries of the designated property, including metes and bounds, and a copy of the deed for the property. A professional surveyor currently registered with the Texas Board of Professional Surveying must certify that all property descriptions with metes and bounds are accurate. ***Label "Appendix A"***	
2. A description of the current use and, to the extent known, the anticipated use(s) of the designated property and properties within 500 feet of the boundary of the designated property. ***Label "Appendix B"***	
3. A site map showing. a. The location of the designated property. b. The topography of the designated property as indicated on publicly available sources, which must note the watershed including the nearest surface water body and whether the designated property is located in a floodplain or floodway, as those terms are defined in Chapter 19 of the Code of Ordinances. c. The detected area of groundwater contamination. d. The location of all soil sampling locations and all groundwater monitoring wells. e. Groundwater gradients, to the extent known, and direction of groundwater flow. f. The ingestion protective concentration level exceedence zone for each contaminant of concern, to the extent known. g. Depth to groundwater for each affected zone. ***Label "Appendix C"***	
4. Provide for each contaminant of concern within the designated groundwater: a. A description of the ingestion protective concentration level exceedence zone and the non-ingestion protective concentration level exceedence zone, including a specification of the horizontal area and the minimum and maximum depth below ground surface. b. The level of contamination, the ingestion protective concentration level, and the non-ingestion protective concentration level, all expressed as mg/L units. c. Its basic geochemical properties (e.g., whether the contaminant of concern migrates with groundwater, floats or is soluble in water). ***Label "Appendix D"***	
5. A table displaying the following information for each contaminant of concern, to the extent known: a. The maximum concentration level for soil and groundwater, the ingestion protective concentration level, and the non-ingestion protective concentration level, all expressed as mg/kg for soils and mg/L for groundwater. b. The critical protective concentration level without the municipal setting designation, highlighting any exceedences. ***Label "Appendix E"***	

ITEM	COH Use Only
6. If the plume extends beyond the limits of property owners listed in this application, list the owners of the additional property beneath which the plume(s) extend(s), and a summary of interactions with those property owners about the plume(s) and this MSD application. Please Note: You are not required under this item to notify affected property owners, only to provide a summary of who affected property owners are, and if there have been any communications. "No contact" can be an acceptable answer. ***Label "Appendix F"***	
7. A statement as to whether the source of the plume has been removed, the plume of contamination is stable (i.e. no change) or contracting, and the plume is delineated, **with the basis for that statement**. Please include historical sampling data. ***Label "Appendix G"***	
8. A statement as to whether contamination on and off the designated property without a Municipal Setting Designation will exceed a residential assessment level as defined in the Texas Risk Reduction Program or analogous residential level set by EPA, if known, and the basis for that statement. ***Label "Appendix H"***	
9. A statement as to whether contamination on and off the designated property with a Municipal Setting Designation will exceed a residential assessment level as defined in the Texas Risk Reduction Program or analogous residential level set by EPA, if known, and the basis for that statement. ***Label "Appendix I"***	
10. Identification of the points of origin of the contamination, to the extent known. **Please list the Potentially Responsible Party (PRP), if unknown, state unknown. (*applications without the PRP listed will be deemed incomplete)*** ***Label "Appendix J"***	
11. Environmental regulatory actions, litigation, and plume identification. a. A description of any environmental regulatory actions that have been taken within the past five years in connection with the designated property, to the extent known. b. A description of any litigation that has taken place within the past five years in connection with the designated property, to the extent known. c. A statement as to whether there are any other remediation activities by the applicant, or any other party or agency, which are not listed in the application. *d.* A statement as to which contamination plume and groundwater zone the applicant is including in the MSD. ***Label "Appendix K"***	
12. A listing of all existing state or EPA registrations, permits, and identification numbers that applies to the designated property. ***Label "Appendix L"***	

ITEM	COH Use Only
13. Provide evidence that the designated property is currently or has previously been under the oversight of the TCEQ or the United States Environmental Protection Agency, as required by the Texas Health & Safety Code § 361.8065(c)(2)(A), and a description of the status of the designated property in the program (the program application number is sufficient evidence). Also, include the state or federal cleanup project manager's name. ***Label "Appendix M"***	
14. A summary of any environmental site assessment reports filed with TCEQ regarding any site investigations or response actions that are planned, ongoing or completed related to the designated property. ***Label "Appendix N"***	
15. A statement as to whether any public drinking water supply system exists that satisfies the requirements of Chapter 341 of the Texas Health and Safety Code and that supplies or is capable of supplying drinking water to the designated property and property within one-half mile of the designated property and the identity of each supply system. ***Label "Appendix O"***	
16. The name and address of each owner or operator of a water well registered or permitted by the state or the Houston-Galveston Subsidence District that is located within five miles of the boundary of the designated property, along with a map showing the location of each well and, to the extent known, a notation of whether each well is used for potable water. Well logs must be included in the electronic copy of the application, but should not be included in the hard copies. (An accompanying electronic excel file with mailing information should be included with your application.) ***Label "Appendix P"***	
17. The name and address of each retail public utility, as defined in section 13.002 of the Texas Water Code that owns or operates a groundwater supply well within five miles of the boundary of the designated property. ***Label "Appendix Q"***	
18. A listing of each municipality, other than the city of Houston, with a corporate limit within one-half mile of the boundary of the designated property. ***Label "Appendix R"***	
19. A listing of each municipality, other than the city of Houston, that owns or operates a groundwater supply well within five miles of the boundary of the designated property. ***Label "Appendix S"***	
20. A listing of owners of real property within 2,500 ft. of the boundary of the designated property as indicated by the most recent appraisal district records. Please Note: This requirement may include real property outside the City of Houston. Be sure to include **ALL** properties in the 2,500 ft. boundary. (An accompanying electronic excel file with mailing information should be included with your application.) ***Label "Appendix T"***	

ITEM	COH Use Only
21. Form U-2012-01 **signed and sealed** by a licensed professional engineer or licensed professional geoscientist authorized to practice in the State of Texas with expertise in environmental remediation. (Form U-2012-01 can be found at www.houstonmsd.org under the "Forms" section on the homepage.) Signing and sealing Form U-2012-01 certifies: a. The contaminants of concern from sources on the designated property or migrating from or through the designated property more likely than not [do exceed] OR [do not exceed] a non-ingestion protective concentration level on property beyond the boundaries of the designated property. (select the appropriate statement) b. All requirements of Section 47-762 of the Houston Code of Ordinances have been met, including demonstration that the groundwater contamination plume has been fully delineated and is stable or contracting in size ***Label "Appendix U"***	
22. If the licensed professional engineer or licensed professional geoscientist determines that contaminants of concern from sources on the designated property are migrating from or through the designated property more likely than not do exceed a non-ingestion protective concentration level on property beyond the boundary of the designated property, then the applicant must: a. Specify the name and address of the owner of each property. b. Send a copy of the application to the owner of the property with the notice of the public meeting. c. Provide documentation that the designated property has been included in a state or federal program that requires that the entire non-ingestion protective concentration level exceedence zone be addressed to the satisfaction of the agency administering the program, along with documentation of the estimated time period in which it is to be addressed. An example of such a program is the Texas Voluntary Cleanup Program (section 361.501 of the Texas Health and Safety Code, as may be amended from time to time). d. Provide documentation upon completion of the state or federal program showing that the non-ingestion protective concentration level exceedences have been addressed to the satisfaction of the agency administering the program. ***Label "Appendix V"***	
23. Form W-2012-01 **certified/signed** by the applicant and any authorized representatives of the applicant(s) listed in the application. (Form W-2012-01 is attached to the end of this application and can also be found at www.houstonmsd.org under the "Forms" section on the homepage.) ***Label "Appendix W"***	
24. Form X-2012-01 **signed** by the property owner or authorized agent (if an authorized agent, you must provide the legal authorization instrument). (Form W-2012-01 is attached to the end of this application and can also be found at www.houstonmsd.org under the "Forms" section on the homepage. ***Label "Appendix X"***	
25. A CD (or other devise) containing the pdf file of the application, Excel spreadsheet of water well owners and property owners for mailing notices, and the pdf file of the well log report. ***Label "Appendix Y"***	

EXECUTIVE SUMMARY

See following pages.

EXECUTIVE SUMMARY

Site Background and Environmental Setting

The Site consists of approximately 11.08 acres of grass-covered land within one (1) land parcel owned by Aga Khan Foundation U.S.A. (AKF-USA), with its local entity known as Imara Houston. The Site is to be developed into the Ismaili Center Houston (ICH), which will consist of an educational/cultural outreach building with landscaped grounds and below-ground parking. The Site is located in a high-rent district in downtown Houston and is surrounded by mixed-use, multi-family residential and commercial properties, a cemetery, and a public park between the Site and Buffalo Bayou, the major drainage feature within the City. Various studies conducted by Intertek PSI (PSI) in 2019 before the initiation of Wild Associates LLC's (WA) TCEQ Affected Property Assessment Report (APAR) indicated environmental risks associated with a former Houston Lighting & Power facility, former underground storage tanks, and a former rail spur.

The APAR was submitted to TCEQ on July 13, 2021. In a July 22, 2021 letter (attached), TCEQ requested that more soil sampling be conducted to evaluate metals and that more groundwater monitoring wells be installed. WA conducted the requested work and submitted APAR Addendum #1 on September 30, 2021. In an October 25, 2021 letter (attached), TCEQ requested additional wells to delineate off-site, impacted groundwater. WA conducted the requested work and submitted APAR Addendum #2 on June 30, 2022. In a July 22, 2022 letter (attached), TCEQ stated that (1) the impacted groundwater plume had been delineated, (2) TCEQ understands that AKF intends to develop a Response Action Plan that addresses soils with COCs above the Total-Soil-Combined PCLs using physical controls, and (3) the APAR cannot be approved until the MSD is approved by the City of Houston.

Exposure Pathway and Potential Receptor Summary

Preliminary to defining the extent of impact at the Site, an evaluation of potential receptors and exposure pathways was completed. The procedure eliminated ecological receptors and eliminated all exposure pathways except soils and groundwater.

The complete or reasonably expected to be complete pathways are Total-Soil-Combined, soil leaching to groundwater, and groundwater ingestion. The objective of this Municipal Setting Designation (MSD) application is to remove groundwater as a medium of concern for continual monitoring or remediation. Since groundwater will no longer be an exposure pathway of concern under this scenario, the soil leaching to groundwater pathway will not be a concern under Site development plans, leaving only the Total-Soil-Combined pathway for development of TCEQ critical Protective Concentration Levels (PCL). The data gathered for the APAR indicate that VOCs, TPH, and metals are COCs for soil and groundwater and are confined to the southern half of the Site within the footprint of the former HL&P facility. Groundwater VOCs have migrated off site to the east and west, but the potential for contact with humans is negligible, and the groundwater plume has been delineated. No utilities or sensitive ecological receptors have been impacted.

Assessment Results

The assessment indicated the following:

1. The Site has two tiers, i.e., the southern, upper tier is elevated about 10 ft above the northern, lower tier, as demarcated by an abrupt grade change near the center of the Site. The Groundwater Bearing Unit (GWBU) is contaminated with VOCs and arsenic above TCEQ Tier 1 Residential PCLs for established Chemicals of Concern (COC) in the upper tier of the Site beneath the footprints of the former HL&P facility and the Ismaili Center Houston. No non-aqueous phase liquids were encountered. The GWBU plume is stable and is being monitored biannually until the APAR and MSD application are approved; TCEQ has given tentative approval to the APAR, subject to the City approving this MSD application. The northern, southern, eastern, and western extents of the plume that define the Protective Concentration Exceedance Zone (PCLE) have been delineated. The dominant direction of flow is to the north and north-northwest toward Buffalo Bayou about 1,200 ft away, but there are lateral components to the east and west. The plume is expected to decrease through natural attenuation.

2. Certain metals and TPH exceed their respective soil leaching to groundwater Tier 1 Res PCLs. TPH exceeds the soil leaching to groundwater Tier 1 Res PCL in a former UST area where soils were excavated for a UST location survey conducted during a prior study; side and bottom samples indicated levels lower than Tier 1 Res PCLs, but the excavated soils were placed back into the excavation and are currently under construction fill material but will be paved over as an engineering control barrier for the future Response Action Plan. Metals and TPH PCLs are proposed for elimination as critical PCLs due to the proposed elimination of the GWBU as a pathway via the City's MSD program. Under this scenario, only metals exceeding the Total-Soil-Combined critical Tier 1 PCLs would remain as critical PCLs.

3. Certain metals exceed Total-Soil-Combined Tier 1 PCLs in very isolated areas of the Site, and their specific sources are unknown but could relate to fill material around the former rail spur and debris left from the demolition of the HL&P facility sometime between 2006 and 2008. The metals define the Total-Soil-Combined critical PCLs in the upper 5 ft considered surface soils in a Commercial/Industrial setting. The ongoing construction of the ICH building has removed much of the impacted soils; any remaining impacted soils will be included in a future Response Action Plan and Response Action Completion Report submitted to TCEQ.

Affected Property Assessment Report, dated July 13, 2021
Ismaili Center Houston Site
2323 Allen Parkway, Houston, Harris County
T No. 3626, RN101891372, CN601032311

Dear Mr. Javery:

The Texas Commission on Environmental Quality (TCEQ) has reviewed the above-referenced Affected Property Assessment Report (APAR). Please see the comments and request for information below. The comments do not require a response. Please submit an APAR addendum, addressing the information requested, within 60 days from the date of this letter.

Comments

1. The TCEQ concurs that the critical protective concentration level (PCL) for metals in soils is the $^{Tot}Soil_{Combo}$ pathway. This is based on that there were no metals, other than arsenic, that exceeded a PCL in groundwater. The concentrations for arsenic in groundwater samples shown on the chemicals of concern (COCs) concentration figures and COCs concentrations summary tables are low enough to be naturally occurring. However, a much higher concentration of arsenic (0.61 mg/l) is shown on Table 5A. That concentration, if correct, would very likely not be naturally occurring.

2. Considering the size of the site and that lead, arsenic, and barium were reported with elevated concentrations at select locations, more sample locations are needed.

3. The only volatile organic chemical (VOC) to exceed the $^{GW}Soil_{Ing}$ PCL in soils was 1,1,2,2-tetrachloroethane at sample location SB-11. Since that chemical was not detected in the groundwater samples, the concentration does not exceed the critical PCL ($^{Tot}Soil_{Combo}$).

Request for Information

4. Per item 1 above, please clarify if the 0.61 mg/l concentration is correct.

5. Please delineate lead and arsenic in the vicinity of sample location EB-9 0-1 where they were reported with concentrations substantially above the critical PCL. At each new

sample location, samples should be collected from 0-1 and 1-2 feet below ground surface (bgs) and analyzed for arsenic and lead.

6. Per item 2 above, please complete more borings in locations that will provide adequate coverage of the site. At each boring location, please collect a soil sample from 0-1 and 1-2 feet bgs and analyze the samples for arsenic, barium, and lead.

7. Please install monitor wells approximately 100 feet north and south of MW-3 and near the property line to delineate VOCs. Please also install a well near MW-3 near the property line to determine if affected groundwater extends off-site.

8. Please install a monitor well south of MW-4 approximately 100 feet from MW-4 and near the property line to delineate VOCs. Please also install a well near MW-4 near the property line to determine if affected groundwater extends off-site.

Questions concerning this letter should be directed to me at (512) 239-2378. When responding by mail, please submit one paper copy and one electronic copy (on USB or disc) of all correspondence and reports to the TCEQ Remediation Division at Mail Code MC-127. An additional copy should be submitted in electronic format to the local TCEQ Region Office. The information in the reference block should be included in all submittals. Note that the electronic and hard copies should be identical, complete copies. A Correspondence ID Form (TCEQ Form 20428) must accompany each document submitted to the Remediation Division and should be affixed to the front of your submittal. The Correspondence ID Form helps ensure that your documents are identified correctly and are routed to the applicable program for a timely response.

Re: Partial Approval with Comments and Request for Information
Affected Property Assessment Report Addendum, dated September 30, 2021
Ismaili Center Houston Site
2323 Allen Parkway, Houston, Harris County
T No. 3626, RN101891372, CN601032311

Dear Mr. Javery:

The Texas Commission on Environmental Quality (TCEQ) has reviewed the above-referenced Affected Property Assessment Report (APAR) addendum. Please see the request for information below. The comments do not require a response. Please submit a second APAR addendum that addresses off-site groundwater within 60 days from the date of this letter.

Comments

1. All request for information items given in the TCEQ's letter, dated July 22, 2021, have been adequately addressed.

2. A deed notice establishing commercial/industrial (C/I) land use will be required if C/I protective concentration levels will be used.

3. The information provided does not support that the on-site affected groundwater is due to an off-site source.

4. The information provided is not sufficient to demonstrate that the source for the affected groundwater at the site is located off-site.

Request for Information

5. Please delineate the affected groundwater off-site in the vicinity of MW-10 and MW-12. Please gain off-site access and install a well approximately 100 feet west of MW-10 and approximately 100 feet east of MW-12, sample the groundwater, and analyze the samples for volatile organic chemicals (VOCs). If the VOC concentrations in the off-site wells are substantially higher than those on-site, the TCEQ will likely conclude that the on-site

affected groundwater is from an off-site source. However, if those conditions do not exist, then additional off-site delineation wells may be required.

Questions concerning this letter should be directed to me at (512) 239-2378. When responding by mail, please submit one electronic copy (on USB or disc) of all correspondence and reports to the TCEQ Remediation Division at Mail Code MC-127. An additional copy should be submitted in electronic format to the local TCEQ Region Office. The information in the reference block should be included in all submittals. Note that the electronic and hard copies should be identical, complete copies. Requested Information – APAR Addendum #2, dated June 30, 2021
Ismaili Center Houston Site
2323 Allen Parkway, Houston, Harris County
T No. 3626, RN101891372, CN601032311

Dear Mr. Javery:

The Texas Commission on Environmental Quality (TCEQ) has reviewed the above-referenced Affected Property Assessment Report (APAR) Addendum. Please see the request for information below. The comments do not require a response.

Comments

1. In its October 25, 2022 letter, the TCEQ requested that affected groundwater be delineated off-site in the vicinity of MW-10 and MW-12.

2. Two monitor wells (MW-15 and MW-16) were installed in April 2022 off-site to establish delineation. For various reasons, the wells were installed at a substantial distance (approximately 600 feet) away from the site.

3. The chemicals of concern detected in the groundwater sample collected from MW-15 were some of the same chlorinated aliphatic hydrocarbons (CAHs) as those on-site. The concentrations for the CAHs were below the protective concentration levels (PCLs). The single chemical detected in the groundwater sample collected from MW-16 [p-isopropyl toluene (IT)] was reported at an estimated concentration below the PCL. IT is not present in on-site groundwater.

4. The TCEQ concurs that groundwater is delineated off-site.

5. The TCEQ understands that Imara Houston (Imara) intends to submit a Response Action Plan and propose to address the soils with COC concentrations above $^{Tot}Soil_{Comb}$ PCLs using building/parking garage concrete foundation as a physical control. Imara intends to address affected groundwater, both on-site and off-site, using a Municipal Settings Designation (MSD).

6. The TCEQ cannot approve the APAR until the MSD is approved by the COH.

Request for Information

7. Please provide a status update on October 1, 2022 concerning the proposed MSD.

8. Please complete semi-annual groundwater monitoring until a decision is made by the COH on the MSD application.

Questions concerning this letter should be directed to me Michael.Duffin@tceq.texas.gov. When responding by mail, please submit one electronic copy (on USB or disc) of all correspondence and reports to the TCEQ Remediation Division at Mail Code MC-127. An additional copy should be submitted in electronic format to the local TCEQ Region Office. The information in the reference block should be included in all submittals. Note that the electronic and hard copies should be identical, complete copies. A Correspondence ID Form (TCEQ Form 20428) must accompany each document submitted to the Remediation Division and should be affixed to the front of your submittal. The Correspondence ID Form helps ensure that your documents are identified correctly and are routed to the applicable program for a timely response.

We, AMERITON PROPERTIES INCORPORATED, a Maryland corporation, represented herein by Jeffry A. Jones, its President and Leslie S. Hamilton, its Administrative Assistant and ARTHUR GARFIELD ROBINSON AND MARIE LAVERNE ROBINSON REVOCABLE TRUST represented herein by Marie LaVerne Robinson, its Trustee, and Charles E. Robinson, its Assistant, hereinafter referred to as Owners of the 11.31 acre tract described in the above and foregoing map of VILLAGE AT ALLEN PARKWAY SEC. 1, do hereby make and establish said subdivision and development plan of said property according to all lines, dedications, restrictions and notations on said maps or plat and hereby dedicate to the use of the public forever, all streets (except those streets designated as private streets, or permanent access easements), alleys, parks, water courses, drains, easements and public places shown thereon for the purposes and considerations therein expressed; and do hereby bind ourselves, our heirs, successors and assigns to warrant and forever defend the title on the land so dedicated.

FURTHER, Owners have dedicated and by these presents do dedicate to the use of the public for public utility purposes forever unobstructed aerial easements. The aerial easements shall extend horizontally an additional eleven feet, six inches (11' 6") for ten feet (10' 0") perimeter ground easements or seven feet, six inches (7' 6") for fourteen feet (14' 0") perimeter ground easements or five feet, six inches (5' 6") for sixteen feet (16' 0") perimeter ground easements, from a plane sixteen feet (16' 0") above ground level upward, located adjacent to and adjoining said public utility easements that are designed with aerial easements (U.E. and A.E.) as indicated and depicted, hereon, whereby the aerial easement totals twenty one feet, six inches (21' 6") in width.

FURTHER, Owners have dedicated and by these presents do dedicate to the use of the public for public utility purpose forever unobstructed aerial easements. The aerial easements shall extend horizontally an additional ten feet (10' 0") for ten feet (10' 0") back-to-back ground easements, or eight feet (8' 0") for fourteen feet (14' 0") back-to-back ground easements or seven feet (7' 0") for sixteen feet (16' 0") back-to-back ground easements, from a plane sixteen feet (16' 0") above ground level upward, located adjacent to both sides and adjoining said public utility easements that are designed with aerial easements (U.E. and A.E.) as indicated and depicted hereon, whereby the aerial easement totals thirty feet (30' 0") in width.

FURTHER, Owners do hereby covenant and agree that all of the property within the boundaries of this plat is hereby restricted to prevent the drainage of any septic tanks into any public or private street, permanent access easement, road or alley or any drainage ditch, either directly or indirectly.

FURTHER, Owners do hereby dedicate to the public a strip of land fifteen (15) feet wide on each side of the center line of any and all bayous, creeks, gullies, ravines, draws, sloughs, or other natural drainage courses located in said plat, as easements for drainage purposes, giving the City of Houston, Harris County, or any other governmental agency, the right to enter upon said easement at any and all times for the purpose of construction and maintenance of drainage facilities and structures.

FURTHER, Owners do hereby covenant and agree that all of the property within the boundaries of this plat and adjacent to any drainage easement, ditch, gully, creek or natural drainage way shall hereby be restricted to keep such drainage ways and easements clear of fences, buildings, planting and other obstructions to the operations and maintenance of the drainage facility and that such abutting property shall not be permitted to drain directly into this easement except by means of an approved drainage structure.

FURTHER, Owners hereby certify that this replat does not attempt to alter, amend, or remove any covenants or restrictions; we further certify that no portion of the preceding plat was limited by deed restriction to residential use for not more than two (2) residential units per lot.

Appendix B

A description of the current use and, to the extent known, the anticipated use(s) of the designated property and properties within 500 feet of the boundary of the designated property.

The Site originally consisted of approximately 11.08 acres of grass-covered land within one (1) land parcel owned by Aga Khan Foundation U.S.A. (AKF-USA). The Site is being developed into the Ismaili Center Houston (ICH), which will consist of an educational/cultural outreach building with landscaped grounds and below-ground parking. The Site is located in a high-rent district in downtown Houston and is surrounded by mixed-use, multi-family residential and commercial properties within 500 ft to the east, west and, south; a cemetery directly to the east; and a public park directly to the north between the Site and Buffalo Bayou, the major drainage feature within the City. With the exception to the multi-family properties immediately to the east, the properties to north, south, and west are separated from the Site with public streets.

Before acquisition by AKF, the Site was owned and operated by various commercial and/or industrial entities. As stated by PSI in their April 30, 2019 Phase I ESA report:

> The site was developed by 1925 with multiple dwelling structures on the southeastern portion and Smith Brothers Concrete Mixing & Asphalt MFG. By the early 1950s, the Houston Lighting & Power Co. [HL&P] occupied the southwestern portion, multiple dwelling structures occupied the southeastern portion and Sears - Roebuck& Co. occupied the northern portion. Houston Lighting & Power Co. was noted with a "filling station" and repair shop on the western boundary of the site. By the late 1960s, the southern portion remains occupied by Houston Lighting & Power Co. with the dwelling structures now demolished and occupied with parking areas. The northern portion of the site was occupied by the Robinson Public Warehouse Co. in the late 1960s. These structures remained relatively unchanged with similar activities conducted until the early 2000s. By 2008, all structures were demolished and the site was noted as grass-covered land.

PSI also noted a rail spur along the eastern boundary of the Site and stated that the HL&P facility had been assigned a Solid Waste Registration number by the Texas Commission on Environmental Quality (TCEQ). TCEQ granted HL&P closure with No Further Action with respect to monitoring or remediation of hazardous materials, indicating that TCEQ considered the Site closed for further regulatory action. PSI noted the following ASTM-defined recognized environmental conditions:

> Although granted Final concurrence by the TCEQ, the decades of fuel tank usage, repair facilities and unknown housekeeping practices of prior occupants, the historical activities at the site are considered a REC. This assessment has revealed the following evidence of RECs in connection with the subject property.
>
> - Railroad spur identified on the eastern portion of the site, from the early 1920s until the mid-1990s.
> - Prior PCB storage associated with the Houston Lighting & Power, located on the site from the early 1950s until the early 2000s.

- Identification of two (2) 250-gallon USTs "filled in place” and listed as installed in 1952 until approximately 1989.

The RECs discovered by PSI served as the basis for the rationale for conducting the TCEQ APAR.

Appendix C

A site map showing:

a. The location of the designated property.

b. The topography of the designated property as indicated on publicly available sources, which must note the watershed including the nearest surface water body and whether the designated property is located in a floodplain or floodway, as those terms are defined in Chapter 19 of the Code of Ordinances.

c. The detected area of groundwater contamination.

d. The location of all soil sampling locations and all groundwater monitoring wells.

e. Groundwater gradients, to the extent known, and direction of groundwater flow.

f. The ingestion protective concentration level exceedance zone for each contaminant of concern, to the extent known.

g. Depth to groundwater for each affected zone.

Attached appendices retain their APAR designation, if applicable. Otherwise, Appendix C denotes MSD specific appendices.

   Table 5D – Groundwater Measurement Summary

The groundwater monitoring program resulted in 16 wells that were sampled at least twice but for the majority at least four times over quarterly events. Where wells have been sampled less than four times, it is because they have become dry through construction dewatering or through inaccessibility caused by construction work. The off-site wells have been sampled twice, and all

remaining on-site wells will be monitored along with off-site wells semiannually per TCEQ instructions. A summary of the status of the wells is presented as follows:

MW-1: destroyed or covered with construction materials

MW-2: Plugged &Abandoned (P&A'd)

MW-3: P&A'd

MW-4: destroyed or covered with construction materials

MW-5: destroyed or covered with construction materials

MW-6: dry from construction dewatering

MW-7: P&A'd

MW-8: P&A'd

MW-9: P&A'd

MW-10: dry from construction dewatering

MW-11: accessible but inaccessible on more recent events due to construction work; dewatering impacts unknown.

Note- MW-8, MW-11, and MW-12 readings from 10/11/2021 not used for gradient due to interference from on-site dewatering.
Note- 5/6/2022 is the most recent sampling event with on-site and off-site groundwater readings. This sampling event is not used for gradient due to interference from on-site dewatering activities, lack of MWs due to P&A of majority of MWs, and distance of MW-15 and MW-16 from the Site.

Appendix D

Provide for each contaminant of concern within the designated groundwater:

a. **A description of the ingestion protective concentration level exceedance zone and the non-ingestion protective concentration level exceedance zone, including a specification of the horizontal area and the minimum and maximum depth belowground surface.**

b. **The level of contamination, the ingestion protective concentration level, and the non-ingestion protective concentration level, all expressed as mg/L units.**

c. **Its basic geochemical properties (e.g., whether the contaminant of concern migrates with groundwater, floats or is soluble in water).**

Based on data from nine (9) groundwater monitoring events in December 2019, January 2020, December 2020, March 2021, April 2021, August 2021, October 2021, May 2022, and August 2022, arsenic (ranging from 0.0103 to 0.0261 milligrams per liter [mg/L]) and chlorinated VOCs (1,1-dichloroethene [0.00793 to 0.222 mg/L]; cis-1,2-dichloroethene [0.0728 to 0.28 mg/L); tetrachloroethene [0.00536 to 0.177 mg/L]; trichloroethene [0.00549 to 0.145 mg/L]; and vinyl chloride [0.0025 to 0.0389 mg/L]) exceed their TRRP Tier 1 Residential $^{GW}GW_{ING}$ PCL (ingestion PCL), which is the critical Residential PCL without an MSD in place.

The TRRP Tier 1 Residential $^{GW}GW_{ING}$ PCLs for the applicable COCs are 0.01 mg/L for arsenic, 0.007 mg/L for 1,1-dichloroethene, 0.07 mg/L for cis-1,2-dichloroethene, 0.005 mg/L for tetrachloroethene, 0.005 mg/L for trichloroethene, and 0.002 mg/L for vinyl chloride. All CoC concentrations, except arsenic, fall well below their TRRP Tier 1 Residential $^{AIR}GW_{INH-V}$ PCL (non-ingestion PCL) of 220 mg/L for 1,1-dichloroethene, 160 mg/L for cis-1,2-dichloroethene, 64 mg/L for tetrachloroethene, 3.1 mg/L for trichloroethene, and 0.49 mg/L for vinyl chloride. Arsenic does not have an applicable $^{AIR}GW_{INH-V}$ PCL. However, Dr. Mike Duffin (TCEQ July 2021 letter in Executive Summary attachments) considers the arsenic levels low enough to be naturally occurring and not requiring further delineation or consideration as a COC.

The chlorinated VOC COCs are confined to the upper tier in the southern half of the Site associated with the footprints of the former HL&P facility and rail spur. The affected groundwater-bearing unit (GWBU) underlies the footprint of the future ICH building and subgrade garage and extends west and east off-site. The well point pumping program will alter the gradient and amplify flow toward the excavation. The horizontal extent of the ingestion protective concentration level exceedance zone is depicted in Appendix C-f.

Chlorinated VOCs are denser than water, but the detected concentrations are within their solubility limits, indicating they would migrate in all directions in the dissolved phase. The impacted GWBU consists of interbedded layers of saturated clayey sand and sandy clay extending from approximately 14 ft to 35 ft bgs. The GWBU is depicted in Appendix C-g.

Appendix E

A table displaying the following information for each contaminant of concern, to the extent known:

a. The maximum concentration level for soil and groundwater, the ingestion protective concentration level, and the non-ingestion protective concentration level, all expressed as mg/kg for soils and mg/L for groundwater.

b. The critical protective concentration level without the municipal setting designation, highlighting any exceedances.

Cumulative data tables displaying the concentration levels of COCs in soil and groundwater (including maximum concentration levels), the ingestion PCLs, the non-ingestion PCLs, and the critical PCLs with and without the MSD, highlighting any exceedances are provided in the below attached Tables:

30 Acres PCL
Highlighted Values Exceed Texas-Specific, Site-Specific, PCL Limits, and have not been Screened Out
Bold values indicate lab detection
NT - Not Tested
Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
*Metal screened out as a COC and is not highlighted for an exceedence of a critical PCL
**Indicates COC ND results adjusted to half the SQL for purposes of comparison to T1 PCL.
J - The identification of the analyte is acceptable; the reported value is an estimate.
J3 - The associated batch QC was outside the established quality control range for precision.
O1 - The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
V - The sample concentration is too high to evaluate accurate spike recoveries.

Bold values indicate lab detection
NT - Not Tested
Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
*Metal screened out as a COC and is not highlighted for an exceedence of a critical PCL
**Indicates COC ND results adjusted to half the SQL for purposes of comparison to T1 PCL.
J - The identification of the analyte is acceptable; the reported value is an estimate.
J3 - The associated batch QC was outside the established quality control range for precision.
O1 - The analyte failed the method required serial dilution test and/or subsequent post-spike criteria.
These failures indicate matrix interference.
V - The sample concentration is too high to evaluate accurate spike recoveries.

Highlighted Values Exceed Texas-Specific, Site-Specific, PCL Limits, and have not been Screened Out
Bold values indicate lab detection
NT - Not Tested
Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
*Metal screened out as a COC and is not highlighted for an exceedence of a critical PCL
**Indicates COC ND results adjusted to half the SQL for purposes of comparison to T1 PCL.
J - The identification of the analyte is acceptable; the reported value is an estimate.
J3 - The associated batch QC was outside the established quality control range for precision.
O1 - The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
V - The sample concentration is too high to evaluate accurate spike recoveries.

Highlighted Values Exceed Texas-Specific, Site-Specific, PCL Limits, and have not been Screened Out
Bold values indicate lab detection
NT - Not Tested
Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
*Metal screened out as a COC and is not highlighted for an exceedence of a critical PCL
**Indicates COC ND results adjusted to half the SQL for purposes of comparison to T1 PCL.
J - The identification of the analyte is acceptable; the reported value is an estimate.
J3 - The associated batch QC was outside the established quality control range for precision.
O1 - The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
V - The sample concentration is too high to evaluate accurate spike recoveries.

Highlighted Values Exceed State-Specific, Site-Specific, and PCL Limit
NT - Not Tested
Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
B - The same analyte is found in the associated blank.
J - The identification of the analyte is acceptable; the reported value is an estimate.
Maximum Concentration Level of Chemical of Concern Exceeding PCL

Highlighted Values Exceed State-Specific, Site-Specific, and PCL Limit
NT - Not Tested
Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
B - The same analyte is found in the associated blank.
J - The identification of the analyte is acceptable; the reported value is an estimate.
Maximum Concentration Level of Chemical of Concern Exceeding PCL

Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
J - The identification of the analyte is acceptable; the reported value is an estimate.
J3 - The associated batch QC was outside the established quality control range for precision.

Highlighted Values Exceed PCL Limit
NT - Not Tested
Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
J - The identification of the analyte is acceptable; the reported value is an estimate.
J3 - The associated batch QC was outside the established quality control range for precision.
J4 - The associated batch QC was outside the established quality control range for accuracy.
B - The same analyte is found in the associated blank.

30 Acres PCL
Highlighted Values Exceed PCL Limit
NT - Not Tested
Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
J - The identification of the analyte is acceptable; the reported value is an estimate.
J3 - The associated batch QC was outside the established quality control range for precision.
J4 - The associated batch QC was outside the established quality control range for accuracy.
B - The same analyte is found in the associated blank.
Maximum Concentration Level of Chemical of Concern Exceeding PCL

Highlighted Values Exceed PCL Limit
NT - Not Tested
Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
J - The identification of the analyte is acceptable; the reported value is an estimate.
J3 - The associated batch QC was outside the established quality control range for precision.
J4 - The associated batch QC was outside the established quality control range for accuracy.
B - The same analyte is found in the associated blank.

Highlighted Values Exceed PCL Limit
NT - Not Tested
Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
J - The identification of the analyte is acceptable; the reported value is an estimate.
J3 - The associated batch QC was outside the established quality control range for precision.
J4 - The associated batch QC was outside the established quality control range for accuracy.
B - The same analyte is found in the associated blank.

Highlighted Values Exceed PCL Limit
NT - Not Tested
Non-detected result that exceeds PCL. Treated as residential assessment level per TRRP-14 Note 4, pg. 9 (Jan. 2019).
J - The identification of the analyte is acceptable; the reported value is an estimate.
J3 - The associated batch QC was outside the established quality control range for precision.
J4 - The associated batch QC was outside the established quality control range for accuracy.
B - The same analyte is found in the associated blank.

If the plume extends beyond the limits of property owners listed in this application, list the owners of the additional property beneath which the plume(s) extend(s), and a summary of interactions with those property owners about the plume(s) and this MSD application. Please Note: You are not required under this item to notify affected property owners, only to provide a summary of who affected property owners are, and if there have been any communications. "No contact" can be an acceptable answer.

The groundwater plume extends west beneath the City of Houston right-of-way (Montrose Boulevard) and east towards Stanford Street as depicted in Appendix C-f; however, no impacts are present across Jackson Street or Ruiz Street from the Site. The groundwater plume does not extend beneath any additional properties. The list of property owners where the plume extends is presented below. The property owners have not been notified about the APAR findings or this MSD application.

The City of Houston is an affected property owner. The extent of the groundwater plume and its relation to the City of Houston right of ways have been discussed with the City's MSD division through prior conversations and emails.

Appendix G

A statement as to whether the source of the plume has been removed, the plume of contamination is stable (i.e. no change) or contracting, and the plume is delineated, with the basis for that statement. mPlease include historical sampling data.

The source of the groundwater plume has been removed.

The presumed sources for the contamination at the Site are:

- A former rail spur located along the eastern Site boundary running from the northern boundary to the southern boundary. Metals were identified as COCs for the APAR and may have had their source as the rail spur.
- PCB transformers at the HL&P facility (SWR 32594). PCBs were not identified as a COC for the APAR.
- Spent solvents at the HL&P facility. Chlorinated VOCs were identified as COCs for the APAR.
- Two 250-gallon underground storage tanks (USTs) described as "filled in place." TPH was identified as a COC for the APAR.

The USTs, rail spur, and HL&P facility no longer exist. The Subject Site was a grass field at the beginning of assessment activities and is currently undergoing construction for the Ismaili Center. The TCEQ Central Registry database identified SWR 32594 to seven (7) waste management units; however, only one (1) unit was constructed (WMU 001) that may have potentially managed chlorinated hydrocarbon waste materials. This WMU and SWR were closed out by TCEQ on November 21, 2005.

The plume contamination is stable.

Based on data from nine (9) groundwater monitoring events in December 2019, January 2020, December 2020, March 2021, April 2021, August 2021, October 2021, May 2022, and August 2022, the plume is maintaining a stable band extending east/west in the southern portion of the Subject Site. The impacted groundwater zone on the Site has been reduced via removal of soils in the GWBU for the below-ground parking garage, such that COC loadings to the system have been reduced. This is to say that the source materials that originally impacted soils and groundwater have been largely removed.

The plume is delineated.

The 1,1-dichloroethene, cis-1,2-dichloroethene, tetrachloroethene, trichloroethene, and vinyl chloride concentrations in monitoring wells to the north (MW-1, MW-2, MW-5, and MW-13), east (MW-16), south (MW-6 and MW-11), and west (MW-15) were all non-detect or below their respective $^{GW}GW_{ING}$ PCLs. The plume extent and delineation are depicted in Appendix C-f, and summarized sampling data tables are attached in Appendix E. Mike Duffin with TCEQ concurs that the plume has been delineated in the attached TCEQ letter, dated July 22, 2022 (Executive Summary attachment).

Appendix H

A statement as to whether contamination on and off the designated property <u>without</u> a Municipal Setting Designation <u>will exceed</u> a residential assessment level as defined in the Texas Risk Reduction Program or analogous residential level set by EPA, if known, and the basis for that statement.

Based on data from nine (9) groundwater monitoring events in December 2019, January 2020, December 2020, March 2021, April 2021, August 2021, October 2021, May 2022, and August 2022, arsenic (ranging from 0.0103 to 0.0261 milligrams per liter [mg/L]) and chlorinated VOCs (1,1-dichloroethene [0.00793 to 0.222 mg/L]; cis-1,2-dichloroethene [0.0728 to 0.28 mg/L); tetrachloroethene [0.00536 to 0.177 mg/L]; trichloroethene [0.00549 to 0.145 mg/L]; and vinyl chloride [0.0025 to 0.0389 mg/L]) exceed their TRRP Tier 1 Residential $^{GW}GW_{ING}$ PCL (ingestion PCL), which is the critical Residential PCL without an MSD in place.

Appendix I

A statement as to whether contamination on and off the designated property <u>with</u> a Municipal Setting Designation <u>will exceed</u> a residential assessment level as defined in the Texas Risk Reduction Program or analogous residential level set by EPA, if known, and the basis for that statement.

All COC concentrations, except arsenic, fall well below their TRRP Tier 1 Residential $^{AIR}GW_{INH-V}$ PCL (non-ingestion PCL) of 220 mg/L for 1,1-dichloroethene, 160 mg/L for cis-1,2-dichloroethene, 64 mg/L for tetrachloroethene, 3.1 mg/L for trichloroethene, and 0.49 mg/L for vinyl chloride in all groundwater monitoring wells. Arsenic does not have an applicable $^{AIR}GW_{INH-V}$ PCL. However, per the TCEQ July 2021 letter (Executive Summary attachment), Dr. Mike Duffin considers the arsenic levels low enough to be naturally occurring and not requiring further delineation or consideration as a COC.

Appendix J

Identification of the points of origin of the contamination, to the extent known. Please list the Potentially Responsible Party (PRP), if unknown, state unknown. (applications without the PRP listed will be deemed incomplete).

The presumed sources for the contamination at the proposed Ismaili Center Houston (Site) are:

- A former rail spur located along the eastern Site boundary running from the northern boundary to the southern boundary. Metals were identified as COCs for the APAR and may have had their source as the rail spur.
- PCB transformers at the HL&P facility (SWR 32594). PCBs were not identified as a COC for the APAR.
- Spent solvents at the HL&P facility. Chlorinated VOCs were identified as COCs for the APAR.
- Two 250-gallon underground storage tanks (USTs) described as "filled in place." TPH was identified as a COC for this APAR.

The USTs, rail spur, and HL&P facility no longer exist. The Site was a grass field at the beginning of assessment activities, and is currently undergoing construction for the Ismaili Center. The TCEQ Central Registry database identified HL&P with SWR 32594 to seven (7) waste management units; however, only one (1) unit was constructed (WMU 001) that may have potentially managed chlorinated hydrocarbon waste materials. This WMU and SWR for HL&P were closed out by TCEQ on November 21, 2005.

Appendix K

Environmental regulatory actions, litigation, and plume identification.

a. A description of any environmental regulatory actions that have been taken within the past five years in connection with the designated property, to the extent known.
The Ismaili Center Houston site is under the oversight of TCEQ for a pending APAR application:

b. A description of any litigation that has taken place within the past five years in connection with the designated property, to the extent known.
No litigation has taken place within the last five (5) years in connection with the Site.

c. A statement as to whether there are any other remediation activities by the applicant, or any other party or agency, which are not listed in the application.
There are no other known remediation activities at the Site by the applicant, or any other party or agency, which are not listed in the application.

d. A statement as to which contamination plume and groundwater zone the applicant is including in the MSD.
The applicant is including the chlorinated VOCs-impacted groundwater-bearing unit extending from approximately 14 feet below ground surface (bgs) to approximately 35 feet bgs in the MSD application.

Appendix L

A listing of all existing state or EPA registrations, permits, and identification numbers that applies to the designated property.

The Ismaili Center Houston site is under the oversight of TCEQ, listed under the construction company McCarthy Building Companies, Inc. (CN602500506) and program ID number RN101891372. SWR/Facility ID is T3626. There is a currently active stormwater permit (TXR1548GM).

Appendix N

A summary of any environmental site assessment reports filed with TCEQ regarding any site investigations or response actions that are planned, ongoing or completed related to the designated property.

The following reports have been filed with TCEQ regarding the Site investigations and/or response actions that are planned, ongoing, or completed related to the Site:

1. April 2019 – Intertek PSI (PSI) Phase I ESA
2. November 2019 – PSI Phase II ESA

Appendix O

A statement as to whether any public drinking water supply system exists that satisfies the requirements of Chapter 341 of the Texas Health and Safety Code and that supplies or is capable of supplying drinking water to the designated property and property within one-half mile of the designated property and the identity of each supply system.

Per Chapter 341 of the Texas Health and Safety Code, the City of Houston Public Works – Drinking Water Operations is the only public drinking water supply system capable of supplying drinking water to the Ismaili Center property. All surrounding properties within 500 ft are residential and/or commercial and are supplied by the City of Houston.

Appendix P

The name and address of each owner or operator of a water well registered or permitted by the state or the Houston-Galveston Subsidence District that is located within five miles of the boundary of the designated property, along with a map showing the location of each well and, to the extent known, a notation of whether each well is used for potable water. Well logs must be included in the electronic copy of the application, but should not be included in the hard copies. (An accompanying electronic excel file with mailing information should be included with your application.)

A 5-mile radius search for water wells was conducted through the Texas Water Development Board (TWDB) and Houston-Galveston Subsidence District (HGSD) websites, which provided the name of each owner or operator of a water well registered or permitted by the state or HGSD that is located within five (5) miles of the boundary of the Site. In many cases, addresses were not provided but only latitude and longitude coordinates. TWDB and HGSD maps are included herein showing the location of each well. A notation of whether each well is used for potable water is shown on the attached spreadsheet summary tables, and available well logs are attached after the spreadsheets. A listing of water wells is provided in Table P-1 (TWDB) and Table P-2 (HGSD); a merged, summary address table using the City of Houston spreadsheet format is provided separately as an electronic file. Water well location maps are identified as follows:

- Appendix P-1 (TWDB)
- Appendix P-2 (TWDB)
- Appendix P-3 (TWDB)
- Appendix P-4 (HGSD)

Please note, the impacted GWBU at the Site and its off-site components are shallow and of limited extent relative to the locations and depths of the water supply wells. The Site GWBU has no effect on these wells.

Dear Sir:

This is to acknowledge receipt on November 8, 1962 of the Drillers Log and Well Data Report sent in by your company for a well drilled in Harris County for City of Houston, Heights Water Well No. 16, on April-1962.

When your logs are received at this office they are located and plotted on county highway maps, this is our reason for requesting accurate location information and a sketch giving distance and direction of the well from permanent land marks.

Our ability to plot these wells with relative accuracy greatly increase their value to us in our work.

We would appreciate receiving this information on the above named well at your earliest convenience.

Please utilize the back of this letter for the requested information.

Yours truly,

James R. Wall

State Well Number	6514409
County	Harris
River Basin	San Jacinto
Groundwater Management Area	14
Regional Water Planning Area	H - Region H
Groundwater Conservation District	Harris-Galveston Subsidence District
Latitude (decimal degrees)	29.8172222
Latitude (degrees minutes seconds)	29° 49' 02" N
Longitude (decimal degrees)	-95.3694444
Longitude (degrees minutes seconds)	095° 22' 10" W
Coordinate Source	Global Positioning System - GPS
Aquifer Code	121EVGL - Evangeline Aquifer
Aquifer	Gulf Coast
Aquifer Pick Method	
Land Surface Elevation (feet above sea level)	66
Land Surface Elevation Method	Interpolated From Topo Map
Well Depth (feet below land surface)	1152
Well Depth Source	Another Government Agency
Drilling Start Date	
Drilling End Date	6/0/1947
Drilling Method	Mud (Hydraulic) Rotary
Borehole Completion	Gravel Pack w/Screen

Well Type	Withdrawal of Water
Well Use	Unused
Water Level Observation	TWDB Recorder Well
Water Quality Available	No
Pump	None
Pump Depth (feet below land surface)	
Power Type	
Annular Seal Method	
Surface Completion	
Owner	City of Houston Lindale Park
Driller	Layne Texas
Other Data Available	
Well Report Tracking Number	
Plugging Report Tracking Number	
U.S. Geological Survey Site Number	294901095221001
Texas Commission on Environmental Quality Source Id	
Groundwater Conservation District Well Number	
Owner Well Number	
Other Well Number	
Previous State Well Number	
Reporting Agency	U.S. Geological Survey
Created Date	1/29/2010
Last Update Date	2/2/2021

Remarks	166 ft of screen between 732 and 1140 ft. Reported yield 1040 gpm with 48 ft drawdown when drilled. Well 4. Transducer; Sutron.
