### EXECUTIVE SUMMARY

#### *Project Overview*

InControl Technologies LLC was retained by 5129 Lawndale, LLC (applicant, Property Owner), to provide environmental consulting services at the former Spraymetal facility located at 5129 Lawndale, Houston, Harris County, Texas. The subject property (the Site) consists of three tracts of land (Lots 10, 11, 12, 13 in Block 2 of the Lawndale Addition, and Lots 5, 6 in Block 1 of Beverly Park Addition) totaling approximately 0.7936-acres located southwest of downtown Houston, Harris County, Texas (**Figure C1**). The property is developed with a 13,258 square foot commercial warehouse building and associated parking. The surrounding area is a mixture of residential and light commercial and industrial businesses (**Figure B1**).

The Site is located within the Brays Bayou Watershed. The site is located outside the 500-year flood plain (**Figure C2**).

Volatile Organic Compounds (VOC) Protective Concentration Level Exceedance (PCLE) zones were identified in groundwater on the subject property. The PCLE zones are depicted on **Figures C3a through C3f**.

#### *Historical Environmental Condition*

The Site is an approximately 0.7936-acre tract of land located at 5129 Lawndale in Houston, Texas. The property is developed with a single industrial warehouse building. The site is bordered to the north by residential development, to the east by Henninger St., to the south by Lawndale Ave, and to the west by commercial development in a mixed-use area of Houston. Residential development is located adjacent north and east of the subject property.

The property has operated as an industrial facility since the 1940s. Most recently the property was occupied by Spraymetal Warehouse. Spraymetal's production included metal spraying, high-velocity oxy-fuel spraying, abrasive blasting, grinding, heat treatment and quenching, filter cleaning, straightening, and welding. InControl Technologies conducted a limited Phase II ESA in October 2019. The Phase II investigation included the installation of four (4) soil borings which were converted into temporary groundwater monitoring wells. The borings were advanced in manufacturing areas near the abrasive blasting room, near the heat treating and quenching trench, near the metal spraying areas, and near the outdoor storage area. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs) and total petroleum hydrocarbons (TPH) (**Tables E1, E2, E4, and E5**). Surface soil samples were also

analyzed for RCRA Metals (**Table E3**). Benzene, TCE and vinyl chloride were detected in soil samples at concentrations greater than the residential assessment level (**Table E1**). TPH was not detected in any of the soil samples at concentrations greater than the residential assessment levels (**Table E2**). RCRA metals arsenic, barium, cadmium, chromium, mercury, and selenium were detected in soil samples at concentrations less than the critical PCLs (**Table E3**). Lead was detected in the surface soil samples at concentrations greater than the Texas-specific background concentration of 15 mg/kg but are still within the range of lead concentrations typically observed in an industrial setting. Groundwater samples collected from temporary monitoring wells reported cis-1,2-DCE and vinyl chloride at concentrations greater than the critical PCLs (**Table E4**). TPH was not detected in the groundwater samples at concentrations greater than the laboratory detection limits (**Table E5**).

In August 2020, InControl Technologies install three permanent groundwater monitoring wells (MW-1, MW-2, MW-3) to assess groundwater impacts identified during the initial Phase II investigation. Three additional monitoring wells (MW-4, MW-5, MW-6) were installed in October 2020 to delineate affected groundwater. Monitoring wells MW-7 and MW-8 were installed in February 2021 and MW-9 was installed in June 2021 to delineate groundwater.

The site is currently enrolled in the Texas Commission on Environmental Quality (TCEQ) Voluntary Cleanup Program (VCP) as VCP No. 3060.

The lateral extent of groundwater impact is delineated to the greatest extent possible in all directions (**Figure C3a through C3f**). Volatile organic compounds (VOCs) were present in groundwater at concentrations greater than the applicable Tier 1 <sup>GW</sup>GW<sub>Ing</sub> PCLs. The PCLE zones are depicted on **Figures C3a to C3f**. The direction of groundwater flow is toward the southeast (**Figure C5**).

Three (3) water well records were identified within a ½-mile radius of the proposed Municipal Setting Designation (MSD) boundary. None of the identified wells are located downgradient of the site. The nearest domestic or public supply well is located approximately 0.27-miles from the subject property in the cross-gradient direction. There were no identified public supply wells within a 0.5-mile radius of the site. Within a 5-mile radius of the proposed MSD boundary, typical completion depths are greater than 100-ft bgs with the median completion depth of 517-ft bgs.

The nearest surface water body is Brays Bayou, located approximately 1.24-miles southeast to east of the site (**Figure C2**). A tributary to Brays Bayou (Yates Gulley) is located approximately 2,285-ft northeast of the proposed MSD boundary.

## Appendix A

Provide a legal description of the boundaries of the designated property, including metes and bounds, and a copy of the deed for the property. A professional surveyor currently registered with the Texas Board of Professional Surveying must certify that all property descriptions with metes and bounds are accurate.

---

The legal description plus a metes and bounds description for the designated property is included in this section. Also included is a copy of the deed for the property.

**Figure A1** depicts the proposed MSD boundary.

The Site is located within the Brays Bayou Watershed and is located outside the 500 year floodplain (**Figure C2**).

The primary chemicals of concern (COC) are tetrachloroethene (PCE) and its degradation products (trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride, 1,1-dichloroethene (1,1-DCE)) and to a lesser extent benzene (**Figure C3a through Figure C3f**). **Figures C3a through C3f** depict the groundwater PCLE zones during the most recent sampling event in September 2021. The sample locations are depicted on **Figure C4**. The direction of groundwater flow is toward the south-southeast (**Figure C5**).

The upper groundwater bearing unit was identified at a depth of 10-feet to 25-feet below ground surface (bgs) and is comprised of a sandy clay to clayey sand. The unit is underlain by a stiff clay.

## Appendix D

For each contaminant of concern within the designated groundwater:

- A description of the ingestion protective concentration level exceedance zone and the non-ingestion protective concentration level exceedance zone, including a specification of the horizontal area and the minimum and maximum depth below ground surface.
- The level of contamination, the ingestion protective concentration level, and the non-ingestion protective concentration level, all expressed as mg/L units.
- Its basic geochemical properties (e.g. whether the contaminant of concern migrates with groundwater, floats, or is soluble in water).

**A) Protective Concentration Level Exceedance (PCLE) Zone** – A review of recent groundwater sampling data indicate the following COCs exceed the applicable Tier 1  $^{GW}GW_{Ing}$  PCLs: tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), vinyl chloride, 1,1-dichloroethene (1,1-DCE), and benzene. The PCLE zones are depicted on **Figure C3a through C3f** and are discussed in more detail below. The area of affected groundwater has been delineated horizontally in all directions to the greatest extent possible, and the plume appears to be stable. The current overall PCLE zone is approximately 263-feet long by 79-ft wide. A comparison of the groundwater sampling results with applicable non-ingestion PCLs ( $^{Air}GW_{Inh-V}$ ) indicates that none of the groundwater samples reported a COC concentration above the  $^{Air}GW_{Inh-V}$  PCL. Therefore, based on the recent groundwater monitoring results, there is no non-ingestion protective concentration level exceedance zone within the proposed MSD boundary.

Soil samples collected from soil borings across the subject property reported chemicals of concern at concentrations less than the Tier 1 Residential  $^{GW}Soil_{Ing}$  PCLs with the exception of TCE and vinyl chloride. The reported concentrations of TCE and VC are less than the Residential  $^{Tot}Soil_{Comb}$  PCLs.

A shallow groundwater bearing unit was identified at approximately 10 to 25-feet below ground surface (bgs) and is comprised of sandy clay to clayey sand. The unit is continuous and semi-confined to unconfined.

## Appendix F

If the plume extends beyond the limits of property owners listed in this application, list the owners of the additional property beneath which the plume(s) extend(s), and a summary of the interactions with those property owners about the plume(s) and this MSD application. *Please Note: You are not required under this item to notify affected property owners, only to provide a summary of who affected property owners are, and if there have been any communications. "No contact" can be an acceptable answer.*

---

The plume extends downgradient to the southeast and does not appear to extend beyond the City of Houston right-of-way along Henninger St. Based on the most recent sampling data, the plume may extend north. No contact has been made with any of the adjacent landowners.

The plume also extends beneath Lawndale and Henninger right-of-ways. A City of Houston monitoring well permit was obtained to install monitoring well MW-9.

## Appendix G

A statement as to whether the source of the plume has been removed, the plume of contamination is stable (i.e. no change) or contracting, and the plume is delineated, **with the basis for that statement.** Please include historical sampling data.

---

Shallow groundwater has been affected by dissolved phase chlorinated hydrocarbons including PCE, TCE, cis-1,2-DCE, 1,1-DCE, vinyl chloride. Benzene was also detected in shallow groundwater. The source of chlorinated hydrocarbons in groundwater is believed to be associated with historical operations conducted by Spraymetal and its predecessors on the subject property. Chlorinated hydrocarbons tend to move rapidly in the sub-surface environment and quickly reach equilibrium as long as there is no ongoing contributing mass source.

Soil samples collected across the site identified benzene, TCE and vinyl chloride in shallow soil samples at concentrations above the residential assessment level. Spraymetal no longer occupies the subject property and all chemical use and storage has been discontinued onsite. The property is currently vacant. There is no soil source area or contributing source present on the subject property.

The lateral extent of groundwater impact in the shallow groundwater bearing unit has been delineated to the greatest extent possible and according to the most recent groundwater data, the plume appears to be decreasing to stable (**Tables E4 through E6**). The groundwater data collected to date indicates that the area of affected groundwater is stable and was the result of historic releases associated with operations on the subject property.

### ***Mann-Kendall Test for Statistical Trend***

InControl Technologies conducted a statistical trend analysis to determine if the target chemicals of concern are increasing, decreasing or remaining stable over time within the groundwater monitoring network. InControl Technologies used the Mann-Kendall Statistical Test for Trends to conduct the trend analysis. The statistical analysis was conducted using QualStat 6.0, a commercially available software package.

The purpose of the Mann-Kendall test is to statistically assess if there is a monotonic upward or downward trend of the variable of interest over time. A monotonic upward (downward) trend means that the variable consistently increases (decreases) through time, but the trend may or may not be linear. The Mann-Kendall test is used in place of a parametric linear regression analysis since the criteria for this test are generally violated with temporal environmental data. The regression analysis requires that the residuals from the fitted regression line be normally distributed; an assumption not required by the Mann-Kendall test since the Mann-Kendall test is a non-parametric or distribution-free statistical test.

### ***Assumptions***

The following assumptions underlie the Mann-Kendall test:

- When no trend is present, the measurements (observations or data) obtained over time are

independent and identically distributed. The assumption of independence means that the observations are not serially correlated over time.

- The observations obtained over time are representative of the true conditions at the various sampling times.
- The sample collection, handling, and measurement methods provide unbiased and representative observations of the underlying populations over time.

There is no requirement that the measurements be normally distributed or that the trend, if present, is linear. The Mann-Kendall test can be computed if there are missing values and values below the sample detection limit. The assumption of independence requires that the time between samples be sufficiently large so that there is no correlation between measurements collected at different times.

### Calculations

The Mann-Kendall Statistical test tests whether to reject the null hypothesis ( $H_0$ ) and accept the alternative hypothesis ( $H_a$ ), where:

- $H_0$ : No monotonic trend
- $H_a$ : Monotonic trend is present

The Mann-Kendall test is conducted as follows:

1. List the data in the order in which they were collected over time,  $x_1, x_2, \dots, x_n$ , which denote the measurements obtained at times 1, 2,  $\dots$ ,  $n$ , respectively.
2. Determine the sign of all  $n(n-1)/2$  possible differences  $x_j - x_k$ , where  $j > k$ . These differences are  $x_2 - x_1, x_3 - x_1, \dots, x_n - x_1, x_3 - x_2, x_4 - x_2, \dots, x_n - x_2, \dots, x_n - x_{n-2}, x_n - x_{n-1}$ .
3. Let  $\text{sgn}(x_j - x_k)$  be the indicator function that takes on the value  $\pm 1, 0$ , or  $-1$  according to the sign of  $x_j - x_k$ , that is:

$$\text{sgn}(x_j - x_k) = \begin{cases} 1 & \text{if } x_j - x_k > 0 \\ 0 & \text{if } x_j - x_k = 0 \\ -1 & \text{if } x_j - x_k < 0 \end{cases}$$

4. Compute the statistic  $S =$

$$\sum_{k=1}^{n-1} \sum_{j=k+1}^n \text{sgn}(x_j - x_k)$$

which is the number of positive differences minus the number of negative differences. If  $S$  is a positive number, observations obtained later in time tend to be larger than observations made earlier. If  $S$  is a negative number, then observations made later in time tend to be smaller than observations made earlier.

5. Compute the variance of  $S$  as follows:

$$Var(S) = \frac{1}{18} \left[ n(n-1)(2n+5) - \sum_{p=1}^g t_p(t_p-1)(2t_p+5) \right]$$

Where  $g$  is the number of tied groups and  $t_p$  is the number of observations in the  $p^{th}$  group. When there are ties in the data due to equal values or non-detects,  $Var(S)$  is adjusted by the tie correction method described in Helsel (2005, p. 191) and included in the formula above.

6. Compute the Mann-Kendall test statistic,  $Z_{MK}$ , as follows:

$$Z_{MK} = \begin{cases} \frac{s-1}{\sqrt{Var(S)}} & \text{if } S > 0 \\ 0 & \text{if } S = 0 \\ \frac{S+1}{\sqrt{Var(S)}} & \text{if } S < 0 \end{cases}$$

A positive (negative) value of  $Z_{MK}$  indicates that the data tend to increase (decrease) with time. To determine if a trend exists at the Type I error rate  $\alpha$ , where  $0 < \alpha < 0.5$ . (Note that  $\alpha$  is the tolerable probability that the Mann Kendall test will falsely reject the null hypothesis.), then the  $H_0$  is rejected and the  $H_a$  is accepted if  $Z_{MK} > Z_{1-\alpha}$ , where  $Z_{1-\alpha}$  is the 100(1- $\alpha$ ) percentile of the standard normal distribution. Following standard TRRP Guidance, InControl Technologies used an  $\alpha$  of 0.05. If the calculated probability ( $p$ ) is less than 0.05, the  $H_0$  hypothesis (no monotonic trend) is rejected in favor of the  $H_a$  hypothesis (a monotonic trend exists in the data). The following sections discuss the results of the Mann-Kendall Statistical Analysis on a well by well basis.

## Results from Statistical Trend Analysis

A Statistical Trend Analysis was conducted for each well reporting a site related compound of concern (COC) above the Tier 1 Residential Protective Concentration Level. Only chemicals with historically detected concentrations exceeding the target PCL within a given well are discussed. Compounds that are below the Tier 1 Residential PCL are not discussed.

### MW-1

Currently only cis-1,2-DCE and vinyl chloride are reported at concentrations greater than the Tier 1 residential PCLs. The following table shows the results for the Mann-Kendall Statistical Test for Trends for all groundwater monitoring data since the well was first installed.

### MW-7

Monitoring well MW-7 is installed downgradient of the source area. Similar to MW-6, monitoring well MW-7 has reported concentrations of all site related compounds of concern (PCE, TCE, cis-1,2-DCE, vinyl chloride and 1,1-DCE) at concentrations greater than the Tier 1 PCLs. The following table shows the results for the Mann-Kendall Statistical Test for Trends for all groundwater monitoring data since the well was first installed.

End Date: 3/28/2022

Location: MW-7

Parameter	Trend	Count	S	S Variance	S Prob	Z Value
Tetrachloroethene	No Trend	4	5	7.6667	7.43	1.445
Trichloroethene	No Trend	4	3	5.0000	18.55	0.894
cis-1,2-Dichloroethene	No Trend	4	-5	7.6667	7.43	-1.445
trans-1,2-Dichloroethene	No Trend	4	3	5.0000	18.55	0.894
1,1-Dichloroethene	No Trend	4	2	8.6667	36.70	0.340
Vinyl chloride	No Trend	4	0	8.6667	50.00	0.000
Benzene	No Trend	4	4	8.6667	15.41	1.019

Stable trends in concentration are noted in monitoring well MW-7. Monitoring well MW-7 is located downgradient of MW-6 which has reported the highest concentrations of site related COCs in groundwater.

## Conclusions

COC concentrations have demonstrated stable to decreasing trends over the past four sampling events. The source has been removed and there is no contributing source to groundwater. Therefore, InControl Technologies has concluded that the overall plume is stable to decreasing.

## Appendix H

A statement as to whether contamination on and off the designated property without a Municipal Setting Designation will exceed a residential assessment level as defined in the Texas Risk Reduction Program or analogous residential level set by EPA, if known, and the basis for that statement.

---

### **On the Designated Property**

As described in **Appendix D**, tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), vinyl chloride, 1,1-dichloroethene (1,1-DCE), and benzene were reported at concentrations that exceed the TRRP residential assessment levels without a municipal setting designation (<sup>GW</sup>GW<sub>ing</sub>) (**Figure C3a through C3f, Table E6**). A review of the most recent groundwater sampling data (September 2021) within the proposed MSD boundary confirms these findings.

### **Off the Designated Property**

The area of impacted groundwater has been delineated to the residential assessment level off-site to the greatest extent possible (**Figures C3a through C3f**).

## Appendix I

A statement as to whether contamination on and off the designated property with a Municipal Setting Designation will exceed a residential assessment level as defined in the Texas Risk Reduction Program or analogous residential level set by EPA, if known, and the basis for that statement.

---

Recent groundwater monitoring data from September 2021 indicate that the area of groundwater impact is delineated. Groundwater samples collected from the existing groundwater monitoring wells reported COC concentrations less than the Texas Risk Reduction Program (TRRP) residential ingestion exceedance level with a municipal setting designation ( $^{Air}GW_{Inh-V}$ ) in all groundwater monitoring wells. Therefore, there is no future contamination exceedance anticipated with the municipal designation for the subject property.

## Appendix J

Identification of the points of origin of the contamination, to the extent known.

- a. **Please list the Potentially Responsible Party (PRP), if unknown, state unknown.  
(applications without the PRP listed will be deemed incomplete)**

---

The area of impacted groundwater has been delineated to the greatest extent possible. Surrounding properties are a mixture of residential and commercial/ industrial complexes. The Potentially Responsible Party (PRP) appears to be the former Spraymetal facility.

## Appendix K

Environmental regulatory actions, litigation, and plume identification.

- a. A description of any environmental regulatory actions that have been taken within the past five years in connection with the designated property, to the extent known.
  - b. A description of any litigation that has taken place within the past five years in connection with the designated property, to the extent known.
  - c. A statement as to whether there are any other remediation activities by the applicant, or any other party or agency, which are not listed in the application.

Subject: MSD applications in areas where the city  
does not currently supply drinking water  
but is capable of supplying drinking water

### Policy

State regulations and City ordinances do not require that all properties within one-half mile of an MSD applicant's property be supplied with drinking water from the City, only that the City is capable of supplying drinking water to the area. Supporting an application for a Municipal Setting Designation (MSD) does not imply or commit the City to providing drinking water to the non-served properties within one-half mile of the site as a result of supporting the application. In addition, the MSD applicant must demonstrate that the area of contamination does not and will not impact any nearby water well(s), otherwise the applicant is responsible for connecting the well owner(s) to the City drinking water system at the applicant's expense.

### Background

In 2003, the Texas Legislature authorized the creation of Municipal Setting Designations (MSDs), which is an official state designation given to property within a municipality or its extraterritorial jurisdiction that certifies that designated groundwater at the property is prohibited for use as drinking water. The law is administered by Texas Commission on Environmental Quality (TCEQ) and requires local city support to designate an MSD. The intent of the legislation is to encourage redevelopment of vacant or abandoned properties while protecting the public health, by providing a less expensive and faster alternative to the existing state environmental regulations governing the investigation and cleanup of contaminated groundwater. On August 22, 2007, City Council approved an Ordinance amending Chapter 47 of the Code of Ordinances by adding Article XIII "Municipal Setting Designations" relating to groundwater, which provides a process to support or not support a MSD application to the State.

### Opportunity

It is anticipated that MSD applications will be submitted where all properties within one-half mile of the proposed MSD boundary are not currently supplied with City drinking water but the City is capable of supplying drinking water in the area. The applicant must technically demonstrate that the area of contamination does not and will not impact any well(s) within one-half mile of the MSD boundary or the applicant is responsible for connecting the well owner(s) to the City drinking water system at the applicant's expense. Supporting MSD applications encourage redevelopment of vacant or abandoned properties and make timely completion of cleanup action achievable while still protecting public health.

### Requirements

The TCEQ requires an MSD applicant to be located within the corporate limits or extraterritorial jurisdiction of a municipality that supplies or is capable of supplying drinking water to the applicant's property and properties within ½ mile of the applicant's property (§ 361.803<sup>1</sup>). TCEQ does not require the municipality to supply drinking water to the area only that the municipality has the capacity to supply drinking water to the area. Also, Chapter 47 Section 765<sup>2</sup> of the City's Code of Ordinances only requires that a public drinking water supply system supply or is capable of supplying drinking water to the designated property and property within ½ mile of the proposed MSD boundary.

In addition, the TCEQ has established requirements (§ 361.808<sup>3</sup>) for the applicant if there are drinking water wells within ½ mile of the proposed MSD boundary. The applicant must determine if groundwater contamination on the site has caused or is likely to cause human health or ecological standards to be exceeded in the area located within ½ mile beyond the MSD boundary. If the investigation shows that the groundwater has not impacted any receptors in the area then the executive director will approve the MSD application. However if the investigation shows that the groundwater contamination has caused human health or ecological standards to be exceeded then the executive director will require the applicant to complete mandatory groundwater response actions including providing owners of impacted potable water wells a reliable alternate water supply. This puts the responsibility of connecting an impacted well owner to the City's potable water system firmly onto the applicant.

### Conclusions

TCEQ does not require a municipality to supply drinking water to an MSD applicant's property and the properties within ½ mile of a proposed boundary, only that the municipality has the capacity to supply drinking water to the area.

While there is no regulation or ordinance that prevents the City from supporting an MSD application in an area where some of the surrounding properties are not supplied with drinking water from the City, PWE staff will evaluate support for these application on a site by site basis.

TCEQ requires the MSD applicant to determine if groundwater contamination from the applicant's property has or is likely to exceed human health or ecological standards. If the standards are exceeded the applicant will have to complete groundwater response actions to reduce the human health or ecological risks. These actions include providing owners of impacted potable water wells a reliable alternate water supply.

### Regulations and Ordinances

<sup>1</sup> § 361.803. ELIGIBILITY FOR A MUNICIPAL SETTING DESIGNATION.

A person, including a local government, may submit a request to the executive director for a municipal setting designation for property if:

- (1) the property is within the corporate limits or extraterritorial jurisdiction of a municipality authorized by statute that has a population of at least 20,000; and
- (2) a public drinking water supply system exists that satisfies the requirements of Chapter 341 and that supplies or is capable of supplying drinking water to:
  - (A) the property for which designation is sought; and
  - (B) property within one-half mile of the property for which designation is sought.

<sup>2</sup> Sec. 47-765. City council public hearing.

(e) The city council shall deny the application if it finds that:

- (1) It does not meet the eligibility criteria of section 361.803 of the Texas Health and Safety Code;
- (2) The municipal setting designation will have an adverse effect on the current or future water resource needs or obligations of the city; or

- 
- (3) There is not a public drinking water supply system that satisfies the requirements of Chapter 341 of the Texas Health and Safety Code and that supplies or is capable of supplying drinking water to the designated property and property within one-half mile of the boundary of the designated property.

<sup>3</sup> § 361.808. INVESTIGATION AND RESPONSE ACTION REQUIREMENTS.

- (a) If no potable water wells are located within one-half mile beyond the boundary of a municipal setting designation, the executive director shall not require a person addressing environmental impacts for a property located in the municipal setting designation to:
- (1) investigate the nature and extent of contamination in groundwater except to satisfy the requirements of Subsection (b); or
  - (2) conduct response actions to remove, decontaminate, or control environmental impacts to groundwater based solely on potential potable water use.
- (b) Notwithstanding Subsection (a), the executive director shall require a responsible person to complete a response action to address environmental impacts to groundwater in a certified municipal setting designation if action is necessary to ensure:
- (1) the protection of humans from exposures to environmental impacts to groundwater that are not related to a potable water use, including exposures from nonconsumptive uses and exposures resulting from inadvertent contact with contaminated groundwater; or
  - (2) the protection of ecological resources.
- (c) If potable water wells are located within one-half mile beyond the boundary of a municipal setting designation, the executive director shall require a person addressing environmental impacts for a property located in the municipal setting designation to complete an investigation to determine whether groundwater contamination emanating from the property has caused or is reasonably anticipated to cause applicable human health or ecological standards to be exceeded in the area located within one-half mile beyond the boundary of the certified municipal setting designation.
- (d) If an investigation described in Subsection (c) confirms that groundwater emanating from the property has not caused and is not reasonably anticipated to cause applicable human health or ecological standards to be exceeded in the area located within one-half mile beyond the boundary of the certified municipal setting designation, the executive director shall approve the completion of groundwater response actions at the property except to the extent that response actions are necessary to satisfy Subsection (b).
- (e) If an investigation described in Subsection (c) confirms that groundwater emanating from the property has caused or is reasonably anticipated to cause applicable human health or ecological standards to be exceeded in the area located within one-half mile beyond the boundary of the certified municipal setting designation, the executive director shall approve the completion of groundwater response action at the source property if the person addressing environmental impacts:
- (1) completes response actions at the source property to remove, decontaminate, or control environmental impacts to groundwater to meet applicable human health or ecological standards; or
  - (2) completes response actions at the source property to remove, decontaminate, or control environmental impacts to groundwater that are not related to a potable water use, including actions to protect humans from exposures from nonconsumptive uses and exposures resulting from inadvertent contact with contaminated groundwater and actions to protect ecological resources, and:
    - (A) provides to owners of impacted potable water wells described in Subsection (c) a reliable alternate water supply that will provide a volume of water sufficient for the intended use for a period not shorter than the period that the impacted wells exceed the human health or ecological standards and, after obtaining permission from such owners, files a restrictive covenant that prohibits the use of groundwater from those wells as potable water and restricts other uses of groundwater in a manner consistent with groundwater quality; or
    - (B) expands the municipal setting designation in accordance with the procedures under this subchapter relating to the initial application for a municipal setting designation to include the properties with impacted potable water wells described in Subsection (c).
- (f) Notwithstanding any other provision of this section, the executive director may require a person responsible for property within a certified municipal setting designation to complete a response action to address environmental impacts to groundwater emanating from the property that has caused or is reasonably anticipated to cause applicable human health or ecological standards to be exceeded in an area located more than one-half mile beyond the boundary of the certified municipal setting designation, provided such action is necessary to ensure:
- (1) the protection of humans from exposures to environmental impacts to groundwater; or
  - (2) the protection of ecological resources.
- (g) This subchapter relates to the scope of the response action that can be required by the executive director in municipal settings designated under this subchapter. Nothing in this subchapter shall be construed to alter or affect the private rights of action of any person under any statute or common law for personal injury or property damage caused by the release of contaminants. Nothing in this subchapter is meant to alter or supersede any requirement of a federally authorized environmental program administered by the State of Texas.

## Appendix P
